

# Methods and Tools for Management Information Systems

## Practise 2

8. November 2010

**Task :** You are going to create an XML application for the day-to-day operations at a university, where students attend lectures held by professors who employ assistants. Each lecture covers at least one subject which is questioned in examinations at the end of each semester. For each exam taken the students receive a grade. Some lectures presuppose other lectures. The university has a number of lecture rooms with a varying number of seats.

- Create an external XML DTD and a valid XML document as an example! Deadline: 16.11.2010
