

Methods and Tools for Management Information Systems

Practise 3

13. Januar 2009

Create following XPathS from the following file:

<http://bauhaus.cs.uni-magdeburg.de/wikitm/0809/Otto.zip>

- 1 Get all elements with attribute "class" and its content "toc"
- 2 Get the sum of all elements with attribute "class" and its content "tocnumber"
- 3 Get only the "real" content of this file which can be found under attribute "id" and its content "column-content"

Use the last XPath-Query and create an XSL-Stylesheet which can be transformed to XHTML 1.1 (<http://www.w3.org/TR/xhtml11/>) with the following content:

- 1 All necessary XHTML 1.1 information and elements ("XHTML 1.1 compatible")
- 2 Title "Otto-von-Guericke"
- 3 A headline (in <H1>) and a corresponding text "Otto-von-Guericke"
- 4 The content of the last XPath-Query
