

Methods and Tools for Management Information Systems

Practise 4

16. November 2009

The president of the university saw your created XML-model from practise 02 and thinks it is a good idea to exchange these data with other universities. He asks you to create a model containing namespaces. Because the president is in two minds about the namespace prefix he asks you for a flexible solution so that the prefix can easily be changed. Deadline: 24.11.2009.
